

## Student launch experiment postponed

The New Mexican Spaceport's student launch experiment, originally scheduled for today, has been rescheduled for May 20 to meet mission specifications.

The third annual student launch, through the New Mexico Space Grant Consortium, allows students to witness their experiments launched from a SL-5 rocket at Spaceport America. The rocket will launch 27 experiments into space and allow students to receive data about it on-site.

The student launch is open to the public for \$45 a person. The last day to register is May 10 at 5 p.m. Registration forms, transportation requirements and additional information may be found at <http://www.launchnm.com>.
