TUCSON - A project developed by a group of students at Wilson K8 school in Oro Valley was selected by NASA to be launched into space next month.

Last summer, students from the school attended a four week science class and develop a project developed by students with the help of their teachers.

The project "inversion Impact on Electrical Energy," developed by the Wilson class and their teacher, Teresa Fritton , was one of 26 selected by NASA to be launched from Spaceport America in New Mexico - the country's first FAA-licensed commercial spaceport.

Mrs. Fritton and her class will travel to New Mexico in April to witness the launch of their project first-hand.
