

Can NASA Develop a “Commercial” Capability?

- The key to developing a commercial capability will be the cost effectiveness of the resultant crew transportation system.
- NASA expects to achieve cost effectiveness through the adoption of several key paradigm changes during the system design and development.
 - Competition via multiple industry partners
 - Non-traditional contracting approach which enables contractor owned and operated designs
 - Efficient and effective government insight/oversight
 - Mature and stable requirements, managed at a higher level
 - Smart application of standards
 - Lean and agile program management
